Main characteristics are the following:

Insulation resistance measurement:

- Measurement voltage: 50 - 1000 V, 10V steps.
- Continuous indication of insulation resistance or leakage current.
- Automatic measurement in sockets with the UNI-Schuko adapter with possibility of configuring pairs of measured cables.
- Automatic discharge of capacitance of tested object after the insulation resistance measurement.
- Acoustic signaling of five-second periods to facilitate obtaining time characteristics.
- Measured test times T_1 , T_2 and T_3 to measure one or two absorption coefficients in the 1... 600 sec. range.
- Indication of actual test voltage during the measurement.
- Protection against measuring live objects.
- Three-lead measurement.

Leakage current measurement.

Continuity measurement of protective and equipotential conductors according to EN 61557-4 with the >200mA current.

Low-voltage circuit continuity and resistance measurement:

- Circuit resistance measurement ($< 1999\Omega$) with $< 15\text{mA}$ current.
- Quick sound signal if circuit resistance is below 30.

Capacitance measurement during the RISO measurement.

Measurement of alternating and direct voltages in the 0...600V range.

990 memory cells and wireless data transmission to a computer using the USB - OR-1 adapted.

Power supply: 4 AA or rechargeable batteries, monitoring of power supply voltage.
